

Satellite Services Fee

The Satellite Service Program provides the client with aftercare services for twelve (12) weeks (at one hour per week) with an SPCSB therapist to help ease the transition from the structured environment of Sanctuary House into independent living. This program bridges the gap with a familiar mental health professional so that the clients transition can be successful.

The purpose of the Satellite three (3) month program is to help clients navigate the transition from a 24 hour supervised setting to an independent living apartment in our Supported Independent Living Program. Each week we will work with the client evaluating and assessing issues they may be having living on their own, where additional support with independent living skills and issues that we need to let his Therapist\Case manager know need to be addressed for ongoing independent skills.

Should the client graduate the Sanctuary House program but decide to move outside of Santa Barbara County the Satellite Service program coordinates with the client to complete the Satellite Service by telephone. In most circumstances the telephone sessions are for thirty (30) minutes per week for a period of twenty-four (24) weeks. However, in this situation the length of sessions is always decided by the treatment provider and the client to serve the best interests of the client.
